MORPHEUS V PRE/POST TREATMENT INSTRUCTIONS

Pre-Treatment Preparations

- Please obtain a copy of your most recent normal PAP test (within the last 12 months) and a recent normal vaginal exam to ensure that there are no active infections
- If you have vaginal herpes, we will need to pre-treat with Acyclovir or Valacyclovir for prophylaxis prior to treatment
- Hair should be shaved in the treatment area 2-4 days prior to the procedure. The hair should not be waxed or chemically removed.
- Perform a vaginal exam immediately prior to the procedure to visualize the area that is going to be treated
- Avoid anticoagulants such as aspirin throughout the treatment regimen, if medical condition permits and pertinent to physician approval. Anticoagulants increase the possibility of bruising.

Post Treatment Guidelines

- Tiny scabs may appear after 1-3 days and stay for several days following the treatment. The scabs should not be touched or scratched even if they itch and should be allowed to flake off naturally.
- During the first 2 days following FormaV/vTone treatment, any mechanical or thermal damage to the area must be avoided.
- During the first 2-7 days following Morpheus8V treatment, any mechanical or thermal damage to the area must be avoided. In case of vaginal discharge, a panty liner may be worn for the first day after treatment
